

stop spam before it reaches your computer & network

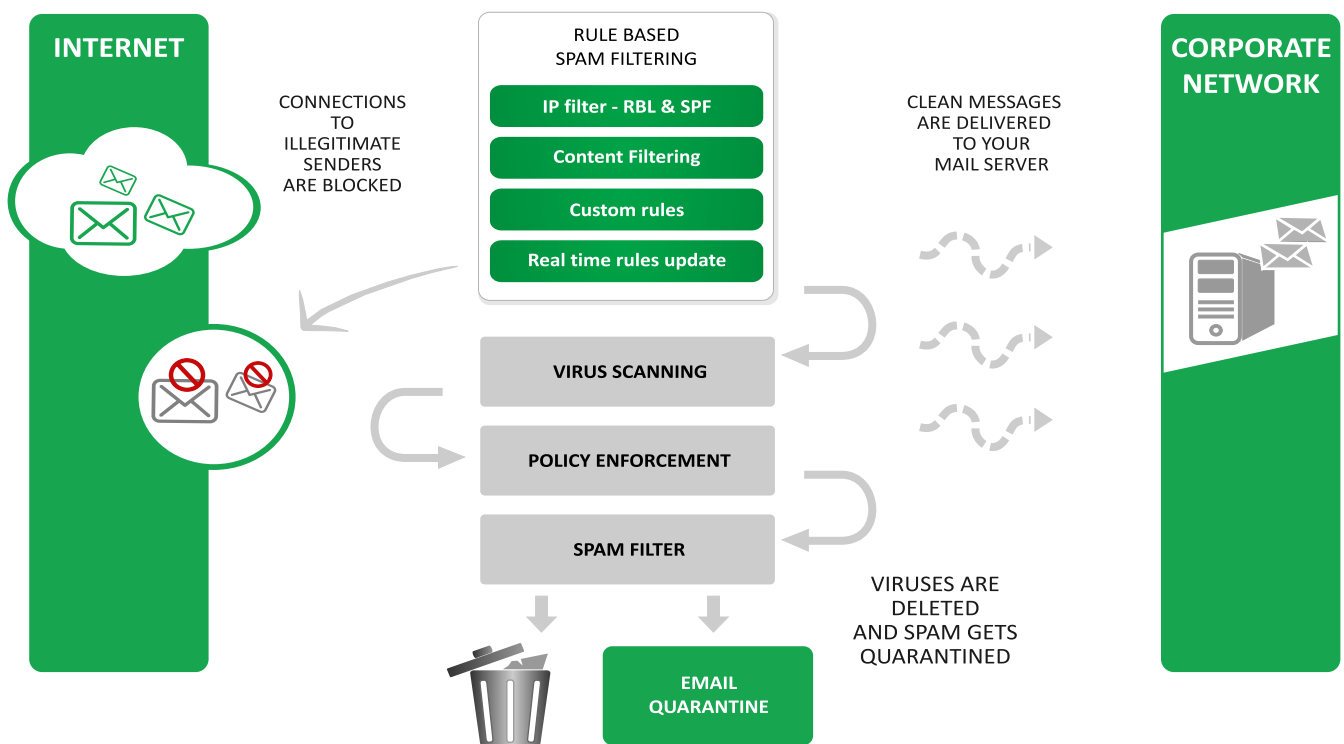

your email is vital, however it exposes your organization to a variety of
serious email-borne threats

blocks **ransomware** too. keep your mailbox clean ...

SpamNab is a fully featured mail security solution, which is suited to organizations of any size from small to medium businesses to large service providers and enterprises.

Your incoming mails are directed to our global network of spam fighting servers. We scan your email for spam, phishing attacks, ransomware, macros, malware & viruses. All offending mail is held in secure quarantine on our servers. Clean mail is automatically forwarded to your server for delivery. SpamNab runs transparently & offers complete email security, with no software to install on your email servers; and no changes on your email clients. Setup takes only a few minutes with any standard SMTP server regardless if located on-premise (in-house) or with your favorite hosting company.

how it works

Instant Activation

Unlimited Messages

Geographic Redundancy

99.95% SLA

No Contact Lock-in

Message Encryption

features

- ✓ 256 bit TLS/SSL encryption with Perfect Forward Secrecy for SMTP
- ✓ Provides DMARC record; get notified when domain names are exploited.
- ✓ Built-in parallel outbound delivery from/to multiple hosted domains
- ✓ Spam scanning for inbound and outbound emails originated from non-intranet server
- ✓ Powerful and innovative geographic filtering for Sender IP, Server IP, URL IP and TLDs.
- ✓ Verify Sender IP against weighted white/blacklist providers (score RBL).
- ✓ Spammer database pollution by deploying unlimited spam traps for your website
- ✓ Various validations for hostname, domain, IP, Helo/ehlo commands and more
- ✓ Anti-Virus checks & cleaning for inbound and outbound emails
- ✓ Different scores per domain for tagging and blocking SPAM
- ✓ Assign an outbound IP address per domain
- ✓ Enforce encrypted connection with email servers
- ✓ Internal DNS cache
- ✓ Custom Spam TAG in the Subject Line
- ✓ Prevent bounces
- ✓ Verifies incoming emails for DKIM and signs outgoing emails (2048 bits RSA)
- ✓ Protection against fake messages that appear to come from your domain or from yourself
- ✓ Built-in rules for newsletters and other messages generated by automated systems
- ✓ Protection against executable files, malicious content, scripts and more
- ✓ Eliminates a large amount of junk emails sent by infected or hijacked computers
- ✓ Protection against forged domains like (fake) yahoo.com gmail.com etc.
- ✓ Easy to replicate messages across the world by typing a backup (sub)domain.
- ✓ Relay outgoing messages through a global or per sender domain ISP (smarthost)
- ✓ Additional SMTP ports
- ✓ Different quarantine account per domain
- ✓ Various tests for embedded pictures
- ✓ Fallback delivery on alternative email servers
- ✓ Protection against wifi, dynamic, invalid or unknown hosts.
- ✓ Whitelist [sender domain] & Blacklist [sender address]
